

3 Allrop Terrace

1828 February 5

Sir,

I beg to return you my
but thanks for a copy of
your paper on shooting stars
and also for the last part
of your remarks on the
Theory of perturbations.

The letter I should have
acknowledged long since, had
I not waited to form some
better acquaintance with the
practical application of the
method.

You allude in the introduc-
tion, to a catalogue of comets
brought down to the present
time as a desideratum in
Astronomy. Such a Catalogue

has recently been published by
Professor Encke, in his new
edition of Olber's work "über
die leichteste und bequemste
methode die Bahn eines Cometen
zu berechnen". I have for
some time past, been
preparing a similar work
for publication but my
present occupations will
prevent my completing
it for some time.

I remain, Sir,
Most respectfully Yours

J. R. Hind

Sir J. W. Lubbock Bart

J. R. Hind

Dear Sir,

Pray excuse a hurried line to inform
 you of my discovery of another new planet at 10^h 10^m
 this evening. It shines as a star of the 9th magnitude
 with a bluish light and evidently belongs to the
 Ultra-Zodiacal group. -

The observations roughly reduced give: -

	<i>h. m. s.</i>	<i>R</i>	
Sept. 13	10.12.9	23.43.56.65	-----
—	11.18.50	23.43.54.32	+ 13.49.45.2 Doubtful.
—	11.41.30	23.43.53.20	+ 13.49.34.2

I duly received the 9th part of the
 "Theory of the Moon &c" and am greatly obliged
 to you for it. I remain, Dear Sir,

Yours very respectfully

J. R. Hind

Sir John W. Lubbock Bart.

1849 April 2.

Dear Sir,

I was very unwell again last week or I should have replied to your kind note long ere this.

I am really hardly able to say whether I shall be well enough to leave home on April 14. My present indisposition is of a very trying and troublesome character arising chiefly from mental harass during the last two or three years. At times it affects me so far as to render me almost insensible to what is passing, and as I have but short notice of these attacks, you will readily believe me when I say I am almost afraid of leaving home, until I have somewhat recovered myself.

I am inclined to say thus much because I have so often been compelled to deny myself the gratification of accepting your kind invitations that I am quite ashamed to send another excuse without assigning a satisfactory reason.

I am greatly obliged to you for the additional part of your researches on the perturbations of planets. Had not my health

Sir J. M. Lubbock Bart

failed me I should have applied your formulae
in calculating the perturbations of Iris, but I
hope it will not be long before I am able to
attend to work of this kind. -

If you would allow me to send you
a definite answer in the course of the present
week I should feel greatly obliged, as I am
most desirous to avail myself of your
kindness. -

Remain, Dear Sir,
Yours very respectfully
J. R. Hind
